

PROJECT 1

DATA CLEANING & PREPARATION

Dataset	Netflix Movies and TV Shows Dataset (Kaggle)
Objective	To identify missing values, remove duplicate records, and correct data formatting issues in the dataset.

1. MISSING VALUES IDENTIFIED

Column	Missing Count
Director	2634
Country	831
Cast	825
Date Added	10
Rating	4
Duration	3

2. DATA CLEANING PERFORMED

1. Missing Value Handling

- Missing values in the Director column were replaced with “Unknown”.
- Missing values in the Country column were replaced with “Unknown”.
- Missing values in the Cast column were replaced with “Not Available”.

- Missing values in the Rating column were replaced with “Not Rated”.
- Remaining missing values in the Date Added column were filled with “Unavailable”.

2. Duplicate Record Check

- The dataset was checked using Excel’s Remove Duplicates feature.
- Result: No duplicate records were found.

3. Data Format Correction

- Date fields were reviewed for consistency.
- Numeric fields were verified for correct formatting.
- Text fields were reviewed and standardized where necessary.

4. Duration/Rating Mismatch Correction

- Three stand-up special records contained duration values (for example, “74 min”) incorrectly stored in the Rating column.
- The duration values were moved to the Duration column.
- The corresponding Rating values were updated to “Not Rated”.

CONCLUSION

The Netflix dataset was successfully analyzed and cleaned by identifying missing values, verifying duplicate records, correcting formatting issues, and resolving column mismatches. The dataset is now more consistent and suitable for further analysis.
