

EXPLORATORY DATA ANALYSIS (EDA) REPORT

Objective: To analyze the e-commerce dataset and identify trends, patterns, distributions and insights from the data

Analysis Performed: • Descriptive Statistics • Product Analysis using Pivot Tables • Payment Method Analysis • Order Status Analysis • Outlier Detection

Key Findings:

- Best Selling Product: CHAIR
- Highest Revenue Product: ₹195620.11
- Most Preferred Payment Method: ONLINE
- Most Common Order Status: CANCELLED
- Total Revenue: ₹1264762
- Average Order Value: ₹1053.968

Outlier Analysis: The TotalPrice column was sorted from highest to lowest value and analyzed. The highest order value found was 3456.4. While some orders had higher values than others, no significant outliers were observed in the dataset.

Conclusion: The dataset was analyzed using Microsoft Excel. Statistical analysis, Pivot Tables, and charts were used to identify sales trends, customer preferences, and order patterns. The analysis provided valuable insights into business performance and customer behavior.
